Wheatstone Evolution Networked Audio Line Premieres at BSW

NEW BERN (February 11, 2008)– WHEATSTONE CORPORATION has announced the creation of a strategic alliance with Tacoma, Washington-based BSW aimed at launching the new Wheatstone Evolution networked console line. Studios equipped with the new Evolution consoles can operate independently yet can share all sources and mixes through the E-series WheatNET Switch—without traffic limitations, audio latency, or machine control delays. Steve Kawasaki from BSW Sales commented on the joint venture:

"We're very excited by this venture. Wheatstone is the go-to digital broadcast console line in the US radio market, and WheatNet is the by far the most robust network audio solution available today. The Evolution offers an astonishingly deep feature set, yet is very easy to configure and install. This means a lot of stations that dismissed digital consoles in the past as too complicated have good reason to reconsider now. We offer a variety of standard packages from 8 to 24 channels, and can custom build to meet just about any need. "

Jay Tyler, Sales Engineer for Wheatstone & Audioarts, confirmed that Wheatstone's decision to make BSW an authorized Evolution Series dealer was based on BSW's solid reputation, commitment to service, and their success in both traditional and online sales markets. Tyler added: "We have had excellent success with BSW as an Audioarts Engineering and Vorsis distributor for well over a decade now. We look forward to BSW's continued growth, which will be aided by the support it will receive from Wheatstone as an authorized distributor of our digital audio control surfaces and digital networks."
